

ArtDisplay

Portfolio Gallery React App — Documentation

- Complete React + Tailwind Source Code
- Responsive Masonry Layout
- Built-in Lightbox Viewer
- Dark/Light Theme Toggle
- Docker Deployment Included

Features Overview

ArtDisplay is a modern, minimalist portfolio gallery application built with React and Tailwind CSS.

It's designed for artists, photographers, and creators who want to showcase their work beautifully.

KEY FEATURES:

1. Responsive Masonry Layout

Images automatically arrange in a masonry grid that adapts to any screen size.

Perfect for displaying artwork, photography, or design portfolios.

2. Built-in Lightbox Viewer

Click any image to open it in a full-screen viewer with keyboard navigation.

Supports arrow keys for next/previous, ESC to close.

3. Dark/Light Theme Toggle

Users can switch between dark and light themes with a single click.

Theme preference is saved in localStorage.

4. Category Filtering

Filter artworks by category with smooth animations.

Categories are configurable via a simple data file.

5. Image Upload (Admin Mode)

Drag-and-drop image upload component for adding new artworks.

Supports JPG, PNG, and WebP formats.

6. SEO Optimized

Meta tags, Open Graph tags, and structured data included.

Fast loading with optimized image rendering.

Installation & Setup

QUICK START GUIDE

Prerequisites:

- Node.js 18 or higher (download from nodejs.org)
- npm (comes with Node.js)

Step 1: Extract Files

Unzip `artdisplay-gallery-app.zip` to a folder on your computer.

Step 2: Install Dependencies

Open a terminal in the extracted folder and run:

```
npm install
```

Step 3: Start Development Server

Run: `npm run dev`

Open `http://localhost:3000` in your browser to see the app.

Step 4: Add Your Artwork

Edit `src/data/artworks.js` to add your images:

```
{ id: 1, title: 'My Artwork', image: '/images/art1.jpg', category: 'Painting' }
```

Step 5: Customize Theme

Edit `tailwind.config.js` to change colors, fonts, and spacing.

Step 6: Build for Production

Run: `npm run build`

The dist/ folder contains your optimized app.

Step 7: Deploy

Upload dist/ to any static host (Cloudflare Pages, Netlify, Vercel).

Or use the included Dockerfile for containerized deployment.
